Grading Government Transparency

Scientists' Freedom to Speak (and Tweet) at Federal Agencies

Recommendations: Federal agency media policies need to be stronger to offer scientists clear guidance and protections against political interference. More broadly, agencies need to put free and open communication ahead of political considerations.

- **Federal agencies** should develop strong media and social media policies that grant scientists the fundamental right of scientific free speech.
- **The Office of Science and Technology Policy** should assess agency progress and speak forcefully on the importance of strong and effective media and social media policies.
- **Congress** should hold agency heads accountable for encouraging the free flow of scientific information to the public.
- **The president** should make strong and effective agency policies on media and social media a priority to ensure that transparency is part of his legacy.
- **Journalists** should call out those agencies that block the free flow of information to the public.

***“Knowledge will forever govern ignorance: And a people who mean to be their own Governors, must arm themselves with the power which knowledge gives.”** — President James Madison*

The Center for Science and Democracy at the Union of Concerned Scientists works to strengthen American democracy by advancing the essential role of science, evidence-based decision making, and constructive debate as a means to improve the health, security, and prosperity of all people.

To learn how you can advocate policies that allow scientists to speak more freely, visit www.ucsusa.org/science-and-democracy-action.
